

Creation of Advanced Ship Notice in the Global Supplier Portal (Supplier User)

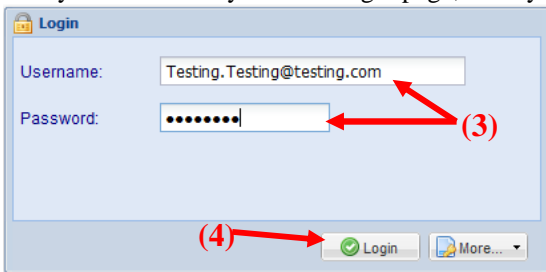

The Advanced Ship Notice (ASN) functionality allows suppliers to submit information regarding the shipment of orders being sent to SBD. Suppliers can create multiple shipments against a single order and can therefore submit multiple ASNs for a single order. However all ASNs for a given order cannot exceed the total quantity of the original order. For each ASN created in the Global Supplier Portal an associated Inbound Delivery (IBD) is created in the associated ERP system.

To Create ASN:

Log into the Global Supplier Portal; by navigating to <http://gsp.sbdinc.com> (1) and clicking the “Sign In” link (2).

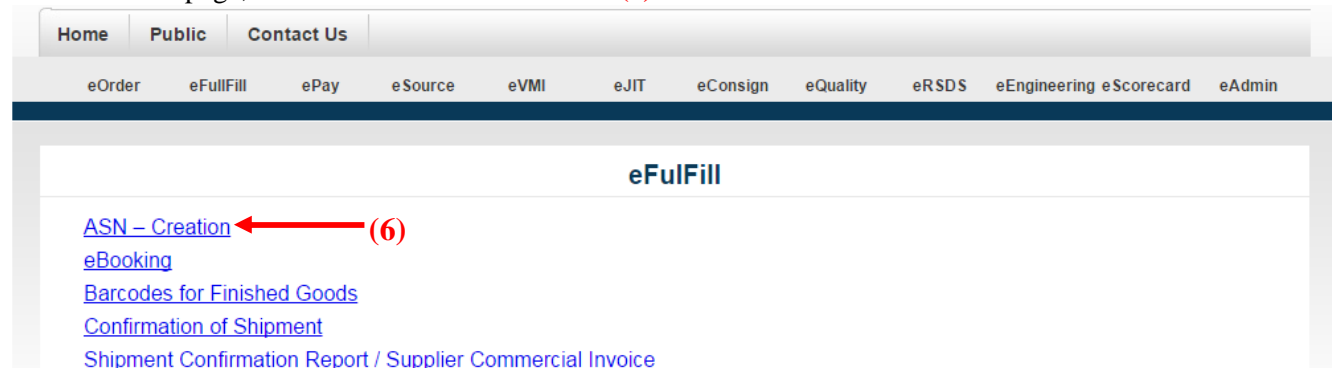

The system will take you to the login page; enter your Username and Password (3) and click the “Login” button (4).

On the Portal home page click either the “eFulfill” button (5) or the “eFulfill” link (5) in the top menu.

On the eFulFill page; click the “ASN-Creation” link (6).

On the ASN page; select the correct vendor number (7) and the correct plant number (8) from the dropdown. Then click the “Execute” button (9).

ASN

Vendor: 20000000 (7)

Plant: 155 (8)

Execute (9)

Processing... please wait.

This will take you to the ASN-Selection screen. This screen shows all orders that are available for creation of an ASN for shipment.

The ASN-Selection Page is divided into two sections; at the top of the page is a section labeled “Selected Items” (A) and below that section is a list of all the orders that are available for you to submit an ASN for the shipment (B).

The key information provided for each order is as follows:

- C: Order Selection Icon
- D: PO Number & PO Line Item
- E: Order Total Qty – Displays the quantity of the original order
- F: Order Open Qty – Displays the quantity of the order that has not yet been received by SBD
- G: Available For Confirmation – Displays the quantity of the order that is still remaining for shipping (ASN)
- H: Schedule Line – For SLA orders this shows the release number, for DPO this will always be 001

In this example:

DPO: The second line is a Discrete PO (DPO) order that is for 125 pieces total (E), with 125 pieces open (F) and 25 pieces available (G) so the supplier has previously shipped (and created an ASN) for 100 pieces that have not yet been received by SBD.

SLA: The third through sixth lines are all releases from a Schedule Line Agreement (SLA) orders that is for 4,300 in total (E). The first release has 100 pieces open (F) and 88 pieces available (G) so the supplier has shipped 12 pieces against this release.

Note that for SLA orders you can only add the oldest order (oldest date) to your selection so only the oldest date has the Order Selection Icon (C). Once you add the oldest release the selection icon will display for the next oldest release so you can add multiple release if you are shipping multiple releases.

To select an order to create and ASN against click the green check mark (10) to the left of the order and it will be moved from the bottom section of the page to the “Selected Items” section

When you click the green check marks ✓ the order is moved from the available order section (B) to the "Selected Items" section (A).

If you add an order in error you can remove it from the Selected Items section by clicking the blue Remove icon (I).

SLA Note: For a SLA you can only remove the newest order in the Selected Items section (the date furthest out). If you remove the newest order the remove icon will display to the left of the next newest order so you can remove that one if needed.

Once you have all the orders you want to include in the ASN in the Selected Items section, click the "Process Selected Items" button (11) to move to the next step.

On the ASN-Execution Data Entry screen, enter the header information for the ASN (12) including; supplier invoice number, expected delivery date, container number, select the correct transportation type from the dropdown, and enter the bill of lading number.

Unless informed otherwise by your SBD contact; the expected delivery date entered in step 12 should be the date you expect the shipment to arrive at the SBD location to which you are shipping.

You need to provide a container number for each order line included in the ASN. If all items are being shipped in the same container you can enter the number in step 14 and click the "Copy" button (J) to copy into all the line at once. If the items are being shipped in different containers you need to enter a container number in each line (K).

Once you have all the header information completed, enter the quantity you will be shipping for each order line (13) and click the Execute button (14). Note: you cannot ship more than the available quantity (L).

(15) 

SLA Note: Please be aware that when creating an ASN that contains multiple releases from the same SLA that you must enter the remaining quantity on the oldest order first and any remaining on the newer order. If you do not do this, the system will make the adjustment automatically.

In the example below the supplier is shipping 100 pieces. They have entered only 50 pieces in the oldest order and 50 for the newer order in the ASN-Execution Data Entry screen. However since the older order has an available quantity of 88 when the supplier clicks the execution button (step 14) the system will reallocate quantity to 88 pieces on the older order and 12 pieces for the newer order on the ASN-Execution Data Review screen.
